

PLUS:

Recognised Prior Learning

Fareport takes your prior learning into account, so you won't need to repeat training you've already completed.

One-to-ones With Your Trainer

Expert advice and guidance throughout your programme from industry expert trainers.

Additional Learning Support

Additional Learning Support (ALS) is tailored to your needs so you can make the most of your Apprenticeship.

Functional Skills Training

Learners under 19 who do not have exemptions will still be required to achieve Level 2 Functional Skills. If over 19 will have the option to opt in or out of Functional Skills training.

AI Delivery & Organisational Transformation

Level 5

30 Hours Over 16 Weeks

Overview

AI is changing how organisations work but successful adoption is about much more than technology. It takes good leadership, sound judgement, clear communication and a practical understanding of risk, workforce impact and implementation. This programme is designed to help employers develop those capabilities in a focused, accessible and workplace-relevant way.

The AI Delivery and Organisational Transformation Apprenticeship Unit provides individuals with the knowledge and practical skills to move AI initiatives from planning into successful implementation. Through this innovative unit, learners will explore how to lead AI transformation programmes, manage workforce transition, oversee governance and risk, monitor AI performance and drive long term adoption across their business.

Training Requirements

Learners must be aged **19 or over**. You do not need learners to be technical specialists. The unit is designed for people who need to lead, evaluate, support and communicate AI-related change, rather than build AI systems themselves. This unit is a good fit for people such as managers, senior leaders and decision-makers involved in AI adoption, procurement, governance or organisational change.
